LIFERING SOFTWARE - WINNING TEAM AT DI2E PLUGFEST 2016

The DI2E Plugfest is the annual demonstration of advancements in the Department of Defense (DOD) Intelligence Mission Area. The Plugfest eXchange (PX) encourages C4I contractors to exchange data demonstrating their ability to provide new capabilities to the Warfighter. During DI2E, we demonstrated LifeRing's ability to interface with the US Navy's DCGS-N, JDISS Intelligence Systems and with SAP hospital databases.

Also during the Plugfest, LifeRing was able to send photographs of documents in Arabic to Pink Summit Inc. that were subsequently transmitted back in English via Cursor on Target (CoT) to a LifeRing-enabled Android Smartphone for display. LifeRing also received, displayed and forwarded other AIS, ELINT, and Radar data received from a KAB Lab data link simulator.

"This was a true collaborative effort and successful show of capability and interoperability. We're very pleased at how all the products worked together and are extremely proud of this recognition." stated Malcolm "Cap" Beyer, CEO of AGIS, Inc.

Stars are awarded in recognition of alignment with the Defense Intelligence Information Enterprise (DI2E) goals

Advanced Ground Information Systems, Inc.'s (AGIS) LifeRing software along with Pink Summit Technology Solutions and KAB Laboratories won top prize at this years DI2E Plugfest Mash Up Challenge.

The team received a 4-Star award along with prize money which was donated to the Fisher House Foundation Charity. Fisher Houses provide military families with housing close to a loved one during hospitalization for an illness, disease or injury.

LifeRing software enables Smartphone, Tablet and PC users to easily and rapidly establish secure adhoc digital networks that provide situational awareness between various types of organizations, creating a Common Operational Picture (COP) between each user by displaying the map symbol and details of all users along with data that they have entered and received from other C4I systems within their network. LifeRing's many-to-many system allows users to communicate using PTT, Video, Messaging, Chat and Whiteboarding features while interfacing via IP on military radio, cellular, handheld satellite, mesh networks, HF Communication Systems and land lines in any combination.

LIFERING PUTS A TACTICAL OPERATIONS CENTER IN THE PALM OF YOUR HAND!
