

RECEIVE, PROCESS AND FORWARD DATA BETWEEN AIR/LAND/SEA

AGIS has successfully integrated Link 16 communications into a combined LifeRing Smartphone AIR/LAND/SEA System. The LifeRing AIR/LAND/SEA system provides the ability to receive, process and forward data between:

MILITARY AIRCRAFT F-16S, 18S, AWACS, ETC., USING LINK -16 MESSAGES

**ARMY AND MARINE CORPS C4 SYSTEMS
USING JVMF OR COT MESSAGES**

NAVY SHIPS USING OTH GOLD AND LINK 16 MESSAGES

The LifeRing PC's and Smartphones are able to view the classified integrated AIR/LAND/SEA Common Operational Picture (COP) along with Intelligence data from other sources and to contribute to the COP. LifeRing's communications architecture enables this data to be sent down to the individual soldier/Marine using various communication methods including cellular, JTRS military radios, MANETs and even MUOS.

In addition to the integrated COP, LifeRing enables all on the LifeRing network the ability to issue Emergency Notifications, Push-To-Talk (PTT), exchange Full Motion Video, Chat, Message (text, photos, voice and video), select different map types, Whiteboard on maps, as well as record, playback and analyze collected data.

Working with another contractor, AGIS has enabled LifeRing to operate in a mode that assures no data is ever retained on the smartphone.
