

LifeRing Now Able to Process and Display Live Video from Detection and Surveillance Systems.

LifeRing is now integrated with two different tactical TV observation systems that enable all on the LifeRing network to selectively view the map location of the cameras and their associated video along with the Common Operational Picture (COP).

The first of these cameras is a land system designed to provide automatic detection, recognition and identification capabilities. It is capable of maximum sensor range performance via highly sensitive sensors and unique video enhancement algorithms. It features Thermal imaging, automatic video tracking and an optional Eyesafe Laser Range Finder (ELRF)

The other video system features a 4 Axes, gyro-stabilized, SWIR or Short-Wave InfraRed imaging camera. It has a continuous, optical zoom lens and Laser pointer for target marking with an optional Panoramic Scan automatic moving object detection capability.

When the tactical TV observation video is sent in real time to the LifeRing COP network, an indication appears adjacent to their map symbol on all the LifeRing Android Smartphones displays that video is available from that location. The LifeRing operators can then select the map symbol and request to display the real time video feed. In addition to the video from the tactical TV observation systems, LifeRing operators can use their Android Smartphone cameras to provide video to the LifeRing network. Whereas the LifeRing Smartphones are limited to viewing one video source at a time, the LifeRing Command Center can simultaneously display the video from 8 cameras simultaneously. The Command Center can replay the video and select frames from the videos to be saved as photographs, and then attach them to the appropriate map location with which they are associated.

Any users with a LifeRing-enabled Android can select to view the same live video feeds as the Command Center. The above tactical TV observation systems can provide valuable intelligence information for:

- Coastal Surveillance
- Border Surveillance
- Smuggling
- Perimeter Surveillance
- Security of Critical Installations
- Armed Forces Facilities
- Offshore Oil/Gas Rigs Security
- Military Bases Security
- Force Protection
