

A C4I System Designed for Scale

LifeRing software allows critical C4I data to seamlessly flow up and down the Chain of Command enabling a true Common Operational Picture (COP) from the Squad level up the highest level of command and control.

This C4ISR encrypted system utilizes standard computers and smartphones that can be connected to military radios, satellite and commercial forms of communications in various combinations requiring very little investment in additional hardware or training.

Encrypted Video can be sent from the Smartphones to other Smartphones and to the Command Center and from the Command Center to the Smartphones all the while using PTT to communicate with all in their COP/ PTT/ Video group.

LifeRing - Complete C4I Anywhere!!
