

LifeRing Groups

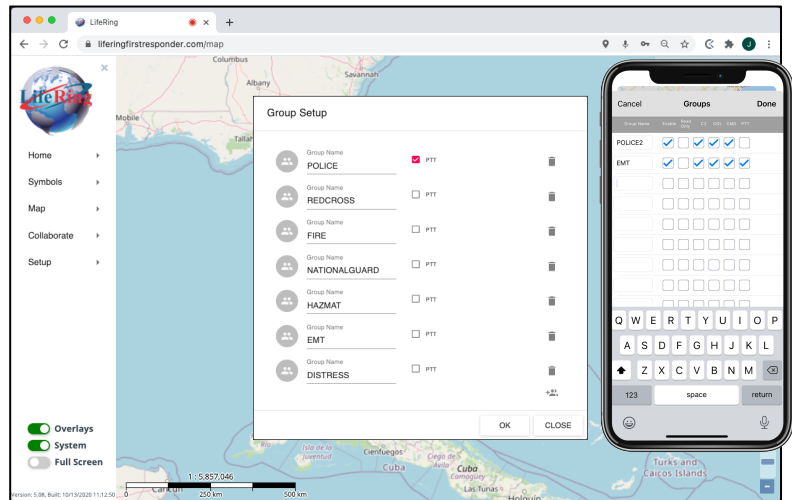

During a large disaster response or military operation with 10,000s of personnel involved, while all pertinent data needs to be available, it is essential to be able to automatically organize the exchanged information. Using LifeRing's new low-cost Cloud based Web-Client software to simultaneously view the location of 10,000s of users' locations on a display is just not practical.

Military, government, and large corporate organizations are managed by functions and by groupings of personnel. For disaster responders (Fire, Police, Red Cross, Utilities, Walmart, National Guard, etc.) it may be by designations such as departments, divisions, and locations. For military units the groupings could be: Companies, Battalions, Regiments and Divisions. LifeRing allows each organization's own Chain of Command to be used to assist in organizing the information.

Each organizational manager is interested in communicating with: 1. Those reporting to him, 2. Those to whom he reports, 3. Organizations essential to his task and 4. Other responding organizations in his geographic area.

LifeRing is designed to meet this need. Organizations can be easily divided into LifeRing Groups that align to conform with the organizational structure by simply entering common agreed-to Group names.

Members in the same named LifeRing Group, automatically view each other's location on a map based Common Operational Picture (COP). Members of the Group can easily communicate using PTT, Chat, Messaging and Whiteboards. Group members can exchange various files (Photographs, Excel, etc.), transmit video and send commands and emergency alerts.

LifeRing Group members can also communicate with Groups with other names enabling communications both up and down the organizational chain of command. Groups can also be rapidly created for an *ad-hoc* command structure that was pulled together at the time of the incident or disaster.
