

LifeRing 6.0 Handsets Now Feature Compass Overlay Option

Military, Hikers, First Responders and others need a compass. LifeRing Android and iOS handsets can select to overlay the map with a compass rose. When GPS is available, the map rose can be centered on your location as you move. Furthermore, a compass is especially advantageous when there are no prominent map features to assist in determining where to place Mil SDT 2525 and other symbols. When GPS is not available, the compass can be used to assist in determining your location. LifeRing provides several different map Modes. See below.

- **North Up**
 - The map display is always in static North orientation no matter what direction the phone is pointing. There is no compass rose.
- **Compass Map North**
 - The map display is always in static North orientation no matter what direction the phone is pointing. The compass dial will rotate to point North.
- **Compass Map Rotate**
 - The map display will rotate to North orientation no matter what direction the phone is pointing. The compass dial will rotate to point North as well.
- **Heading Up**
 - The map display is always in static North orientation no matter what direction the phone is pointing. The heading icon is static pointing North.
