

AGIS Introduces TEV: Tactical Encrypted Videoconferencing

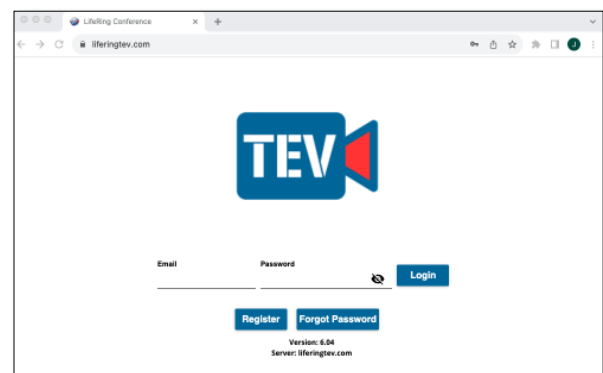

AGIS has added videoconferencing inside our tactical, encrypted LifeRing application. TEV (Tactical Encrypted Videoconferencing) works like most other popular videoconferencing systems in that you can easily invite participants to a collaborative video meeting with real-time audio, video, chat and share screen functions. However, TEV runs inside our highly-secure and encrypted LifeRing application and has the ability to operate on your own server and with no internet required.

AGIS will soon be offering a stand-alone version of TEV. This white-label product can be rebranded for any company or organization. It includes all the features of most other videoconferencing services but can operate on your own server and with no internet required.

See a video of TEV in action here:
