

A Complete CJADC2 COP ON A SMARTWATCH

Sounds impossible but it isn't. It represents the Art of the Possible.

Our Data Fabric/Server interfaces with Link -16, JVMF, OTH Gold, CoT and NATO NVG and NFFI. It enables interoperability between these data links and converts the data to our internal superset format MDDL (Multi Domain Data Link) which can also contain data from 25 different types of sensors. The sensor data can be selected to be sent to any of the tactical data links. All data is AES 256 bit encrypted and then additionally encrypted by the communications system using Type 1 or CSfC encryption.

The MDDL data is then sent to PCs, Smartphones and Samsung Smartwatches for display. The Smartwatch reports to the Server the Biometric Data associated with the watch wearer.

A video of the Smartwatch performing unclassified functions can be seen here.
