

## AGIS Adds Alarms Feature to Enable a Global Surveillance System

The system can ingest video feeds from smartphones, PCs, IP cameras, body cameras, motion detectors, etc... and display the streams inside the LifeRing interface along with the locations of the devices. The video feeds can be triggered by a person manually, or timers or by an alarm from a motion sensor or contact switches or Gate switches. Multiple, live video feeds, switch openings, motion detectors, etc. can be viewed by system users anywhere in the world enabling a local or remote global surveillance system.

The videos, switch openings are archived for search and review and are stored locally or in the cloud for after-action reporting. Our video integration includes our own Tactical Video Conferencing System designed specifically to work with U.S. and other countries' Military Command and Control Systems.

This vital tool is just one of the many unique capabilities in our CJADC2 All Domain Air/Ground C5ISR system. AGIS' CJADC2 C5ISR software is available for immediate delivery through a Firm Fixed Price (FFP) GSA Advantage Program, which permits it to be purchased with a purchase order without requiring FAR competition. This system can be easily expanded to include the processing, correlation and fusion of additional sensors. To view the GSA prices just click on:
