

LifeRing and ATAK in Split Screen can PTT to AGIS Tactical Watch

AGIS' LifeRing clients are able to exchange Location, Chat, Markers and Push-To-Talk (PTT) data with ATAK clients including our Tactical smartwatch - even when running ATAK and LifeRing side-by-side on a split-screen Tactical handset. This combined ATAK/LifeRing enables wider use of U.S. national data as LifeRing natively ingests, normalizes, and redistributes data across a wide range of tactical and operational standards. LifeRing correlates inputs from multiple C2 and C5ISR systems into a single, de-conflicted operational picture, reducing duplicate tracks, misidentification, and stove-piped lack of awareness. Operators no longer need to switch apps, radios, or workstations to understand what is happening beyond the ATAK-only network - critical in time-compressed, high-risk environments.

Tactical Interoperability at the Lowest Level

A split-screen tactical handset can now deliver ATAK's widely-used tactical user interface in tandem with LifeRing's multi-protocol, multi-domain data fusion providing a richer, more complete Common Operational Picture and provide seamless interoperability across C2 and C5ISR ecosystems.
